

Van de Vegte, J. (John)
 Feedback control systems / John Van de Vegte.—3rd ed.
 p. cm.
 Includes bibliographical references and index.
 ISBN 0-13-016379-1
 1. Feedback control systems. I. Title.
 T221.V29 1994 93-10418
 629.87—dc20 CIP

Acquisitions editor: Don Fowley
 Editorial/production supervision: Raeya Maes
 Cover designer: Maureen Eide
 Prepress buyer: Linda Behrens
 Manufacturing buyer: Dave Dickey

The author and publisher of this book have used their best efforts in preparing this book. These efforts include the development, research, and testing of the theories and programs to determine their effectiveness. The author and publisher make no warranty of any kind, expressed or implied, with regard to these programs or the documentation contained in this book. The author and publisher shall not be liable in any event for incidental or consequential damages in connection with, or arising out of, the furnishing, performance, or use of these programs.

FEEDBACK CONTROL SYSTEMS

Third Edition

JOHN VAN DE VEGTE
 Department of Mechanical Engineering
 University of Toronto

vi

3	MODELING OF FEEDBACK SYSTEMS AND CONTROLLERS	60
3.1	Introduction	60
3.2	Feedback System Model Examples	60
3.3	Feedback Systems for Motor Position and Speed Control	65
3.4	Attitude Control of Spacecraft	68
3.5	Block Diagram Modeling of Pneumatic PID Controllers	70
3.6	Electronic Controllers and System Simulation Using Operational Amplifiers	74
3.7	Block Diagram Reduction	79
3.8	Signal Flow Graphs and Mason's Gain Formula	85
3.9	Conclusion. Higher-Order Systems Problems	87
4	THE PERFORMANCE OF FEEDBACK SYSTEMS	97
4.1	Introduction	97
4.2	Effect of Feedback on Sensitivity and Disturbance Response	98
4.3	Steady-State Errors in Feedback Systems	103
4.4	Transient Response Characteristics and System Stability	106
4.5	Transient Response Versus Steady-State Errors	111
4.6	Routh-Hurwitz Stability Criterion	116
4.7	Conclusion. Computer-Aided Analysis and Design Problems	118
5	INTRODUCTION TO FEEDBACK SYSTEM DESIGN	125
5.1	Introduction	125
5.2	Transient Response Performance Criteria	125
5.3	Effect of System Zeros. Pole-Zero Cancellation	129
5.4	Design Preliminaries: Configurations, Controllers, and Constraints	134
5.5	Dynamic Compensation: Velocity Feedback	137
5.6	Series Compensation Using PID Controllers	139
5.7	Conclusion Problems	147
5	THE ROOT LOCUS METHOD	157
6.1	Introduction	157
6.2	Root Loci	159
6.3	Rules for Root Locus Plotting	161
6.4	Root Locus Examples: Plotting and Sketching	163
6.5	Root Loci and System Design	169
6.6	Phase-Lead Compensator Design Using Root Loci	172
6.7	Phase-Lag Compensator Design Using Root Loci	176
6.8	PID Control Design Using Root Loci	178
6.9	Other Uses of Root Loci and Conclusion Problems	185

Contents

	PREFACE	xi
1	INTRODUCTION AND LINEARIZED DYNAMIC MODELS	1
1.1	Introduction	1
1.2	Examples and Classifications of Control Systems	1
1.3	Open-Loop Control and Closed-Loop Control	2
1.4	Control System Analysis and Design	4
1.5	Linearized Dynamic Models	6
1.6	Laplace Transforms	8
1.7	Transfer Functions, Block Diagrams, and the s-Plane	11
1.8	Transient Response and Inverse Laplace Transformation	15
1.9	Transient Response with Repeated and Complex Poles	21
1.10	Conclusion Problems	26
2	TRANSFER FUNCTION MODELS OF PHYSICAL SYSTEMS	30
2.1	Introduction	30
2.2	Mechanical Systems	30
2.3	Electrical Systems: Circuits	34
2.4	Electromechanical Systems: Motors and Generators	39
2.5	Thermal Systems	41
2.6	Fluid Systems	45
2.7	Fluid Power Control	50

viii

10.5	Digital Controllers by Continuous System Design	301
10.6	Direct Design of Digital Controllers	305
10.7	Frequency Response and the w and Bilinear Forms	310
10.8	Conclusion	314
	Problems	314
11	STATE-SPACE ANALYSIS	321
11.1	Introduction	321
11.2	State-Space Models	321
11.3	State-Space Models for Physical Systems	324
11.4	Transfer Function Matrices and Stability	327
11.5	Solution of the State Equation $\dot{x} = Ax + Bu$	330
11.6	Eigenvalues, Eigenvectors, and Modes	334
11.7	Controllability, Observability, and Stabilizability	338
11.8	State-Space Methods for Digital Simulation and Control	340
11.9	Conclusion	342
	Problems	343
12	INTRODUCTION TO STATE-SPACE DESIGN	351
12.1	Introduction	351
12.2	State Feedback and Pole Assignment	352
12.3	Pole Assignment Using Companion Matrices	356
12.4	Optimal Control and the Optimal Regulator Problem	358
12.5	Modal Control for Pole Assignment Using State Feedback	362
12.6	Multivariable Integral Control	368
12.7	Feedforward Control for Measurable Disturbances	372
12.8	Dynamic Observers and Output Feedback Design	376
12.9	Conclusion	379
	Problems	379
13	MULTIVARIABLE SYSTEMS IN THE FREQUENCY DOMAIN	
13.1	Introduction	385
13.2	System Configuration and Equations	386
13.3	Interaction and Decoupling	387
13.4	Basic Stability Theorem	390
13.5	Design by Nyquist Array Techniques	392

Contents

vii

7	FREQUENCY RESPONSE ANALYSIS	195
7.1	Introduction	195
7.2	Frequency Response Functions and Plots	196
7.3	Nyquist Stability Criterion	198
7.4	Polar Plots and Nyquist Diagrams	200
7.5	Bode Plots	204
7.6	Relative Stability: Gain Margin and Phase Margin	209
7.7	Examples of Bode Plots	211
7.8	Closed-Loop Frequency Response and M Circles	215
7.9	Conclusion	217
	Problems	217
8	FREQUENCY RESPONSE DESIGN	222
8.1	Introduction	222
8.2	Dynamic Compensation	222
8.3	Frequency Response Performance Criteria	225
8.4	Performance Specifications on the Bode Plot	228
8.5	Closed-Loop Frequency Response and the Nichols Chart	232
8.6	Design of Phase-Lag Compensation	235
8.7	Design of Phase-Lead Compensation	240
8.8	Design of PID Controllers	246
8.9	Open-Loop Unstable or Nonminimum-Phase Plants	253
8.10	Systems with Transport Lag	255
8.11	Feedforward Control	256
8.12	Conclusion	257
	Problems	257
9	DIGITAL CONTROL SYSTEMS	264
9.1	Introduction	264
9.2	Components in a Process Control Configuration	265
9.3	Features and Configurations of Computer Control	266
9.4	Control Practice: A Level Control Example	268
9.5	Sampling Characteristics and Signal Reconstruction	270
9.6	Control Algorithms and Finite Differences	275
9.7	Z Transforms	279
9.8	Z Transfer Functions	281
9.9	System Configuration for Analysis and Design	284
9.10	Conclusion	285
	Problems	286
10	DIGITAL CONTROL SYSTEM ANALYSIS AND DESIGN	289
10.1	Introduction	289
10.2	Closed-Loop Transfer Functions and Block Diagram Reduction	289
10.3	Transient Response of Digital Control Systems	291
10.4	The z -Plane and Root Loci	296

Contents

ix

14.7	Popov and Circle Criteria for Stability	416
14.8	Conclusion	419
	Problems	419
APPENDIX A: VECTORS, MATRICES, AND DETERMINANTS	425	
A.1	Vectors and Matrices	425
A.2	Vector and Matrix Operations	426
A.3	Determinants, the Inverse, and the Rank of a Matrix	428
A.4	Matrix Calculus	428
APPENDIX B: COMPUTER AIDS FOR ANALYSIS AND DESIGN	430	
B.1	Package Features and System Requirements	430
B.2	The Student Edition of MATLAB	431
B.3	General Description	431
B.4	Some Aspects of Operation and Plotting	432
B.5	Step Response of a Transfer Function Model	433
B.6	Root Locus Plots	434
B.7	Polar Plots	435
B.8	Bode Plots	436
B.9	References	438
