

Introduction to 8086 Assembly

Lecture 1

Behrooz Nasihatkon

1928

K. N. Toosi University of Technology

Introduction to 8086 Assembly Language

- 3 credits
- Saturday, Wednesday, 15:30-17:30 AM
- Instructor: Behrooz Nasihatkon
- Email: nasihatkon@kntu.ac.ir
- Room: EC building, level 3

Grading

- Homeworks
- Quizzes
- Project(s)
- Midterm Exam
- Final Exam

Why assembly?

- Going low-level!
- **How programming languages are implemented (code, variables, arrays, functions, etc.)!**
- Writing efficient programs
- System programming
- Writing device drivers
- Interfacing with high-level languages like C
- Reverse engineering

x86 & x86-64 Assembly

Major Assemblers

- Microsoft Assembler (MASM)
- GNU Assembler (GAS)
- Flat Assembler (FASM)
- Turbo Assembler (TASM)
- **Netwide Assembler (NASM)**

1928

Backward compatibility

- Look at
 - <https://en.wikipedia.org/wiki/X86>

1928

K. N. Toosi University of Technology

Our platform

- **Hardware:** 80x86 processor (**32**, 64 bit)
- **OS:** Linux
- **Assembler:** Netwide Assembler (NASM)
- **C Compiler:** GNU C Compiler (GCC)
- **Linker:** GNU Linker (LD)

1928

How does an assembly code look like?

Write a C program named **test.c**.

Compile it to x86 assembly language, the **AT&T syntax**

```
>>> gcc -S -o att.s test.c
```

Now compile to the **Intel syntax**:

```
>>> gcc -S -masm=intel -o intel.s test.c
```

Compare the two assembly syntaxes (output files att.s and intel.s)
